Use the dig command to query A/CNAME/MX/NS records from various machines/domains of your choice. Then execute reverse lookups as well.

```
# Get A/AAA records from manager server
```

```
$ dig +noall +answer @138.68.70.72 example.pojtinger A
```

```
example.pojtinger.      3600    IN      A        138.68.70.72
```

```
$ dig +noall +answer @138.68.70.72 example.pojtinger AAAA
```

```
example.pojtinger.      3600    IN      AAAA     2a03:b0c0:3
```

```
# Get A/AAAA records from worker server
